

Card Account Updater Via OmniFund

Activate Account Updater with OmniFund and see your approval rate improve and service interruptions decrease.

OmniFund Card Account Updater

- + Increase transaction approvals
- + Reduce service cancellations
- + Lower customer service costs
- + Enhance account update processes
- + Improve customer retention
- + Decrease the amount of lost revenue

Access to Cardholders' Current Payment Account Information

If your business has subscription billing, recurring payments, or accepts installments, or manages an account-on-file process, Account Updater is essential. Customer accounts are directly linked to the card issuer, so your business always has the most up-to-date credit card information for your customers on file.

Opportunity for a Better Experience with Your Company

Account Updater decreases the amount of time you spend chasing declined credit card transactions by intervening before a payment is processed. Account Updater is convenient for both merchants and customers. It eliminates service interruptions and preserves the customer relationship by removing negative interactions.

Secure Connection Directly to the Credit Card Issuer Database

If your customer's issuing bank participates in Account Updater, their card information is automatically verified and compared to the issuer's database. Updates to the account including card number changes, expiration date updates, or closed accounts are communicated directly back to OmniFund. When Account Updater is enabled through your OmniFund account, all data remains securely encrypted on the OmniFund servers, keeping your company out of PCI scope.

Total Turnkey Solution

Whether Account Updater is enabled through your OmniFund account or accessed using our APIs, your experience is seamless. Using Account Updater is simple and once it is set up, your business will begin to immediately reap the benefits of automatically having the most current customer account information on file.
