

## OmniFund Hosted Payments Pages

---

Accept online payments  
without handling sensitive  
financial data.

## OmniFund Hosted Payments

- + Secure transactions
- + Enhance fraud controls
- + Customizable integrations
- + Multiple online payment options
- + Customer-initiated payment requests
- + ACH and credit card convenience fee support

### Process Payments Through Our Secure Gateway

With OmniFund's secure gateway, you can offer customers the convenience of online transactions with a single click. OmniFund offers two different solutions—Click-n-Pay, which provides customers with a link on your website, email, or text invoice that allows them to manage their payment accounts, and OneClick, a link or button which directs the user to a one-page payment form. Our hosted payments are customizable and easy to implement, while keeping merchants out of PCI scope by processing sensitive customer data through OmniFund's secure gateway.

### Accept Multiple Forms of Payment

Our hosted payments pages are flexible enough to accommodate the preferred payment options of your customers, while still ensuring secure online transactions. Accept Level-II and Level-III credit card processing, ACH transactions, and even digital wallet payments like Google Pay and Apple Wallet. For added convenience, you can set up recurring payment options with your customers. OmniFund even offers convenience fee support for both credit card and ACH transactions.

### Seamlessly Integrate Hosted Payment Pages with Your Website

OmniFund solutions are equipped with developer tools and come with a vast Knowledge Base for training and support, so that you have everything you need to set up hosted payments with minimal programming or coding skills. With OmniFund, you can easily customize the payment form and receipt with your logo and contact information, and track payments with automatic receipts for both you and your customer for each transaction. Best of all, customers won't know they've even left your site, so they receive a seamless user experience while you stay out of scope.

### More Fields Offer Greater Security and Fraud Control and Customer Convenience

With built-in security functions like BIN filtering and digital identity verification, you can quickly identify customers from cyber threats. By using OmniFund's hosted payment solution to process transactions through our secure gateway, you reduce the likelihood of a data breach, giving customers peace of mind and keeping you PCI compliant. Plus, our custom fields make it easy to track transactions and enhance your reporting for even more efficiency.
